(Skill Week 5)  
Code:

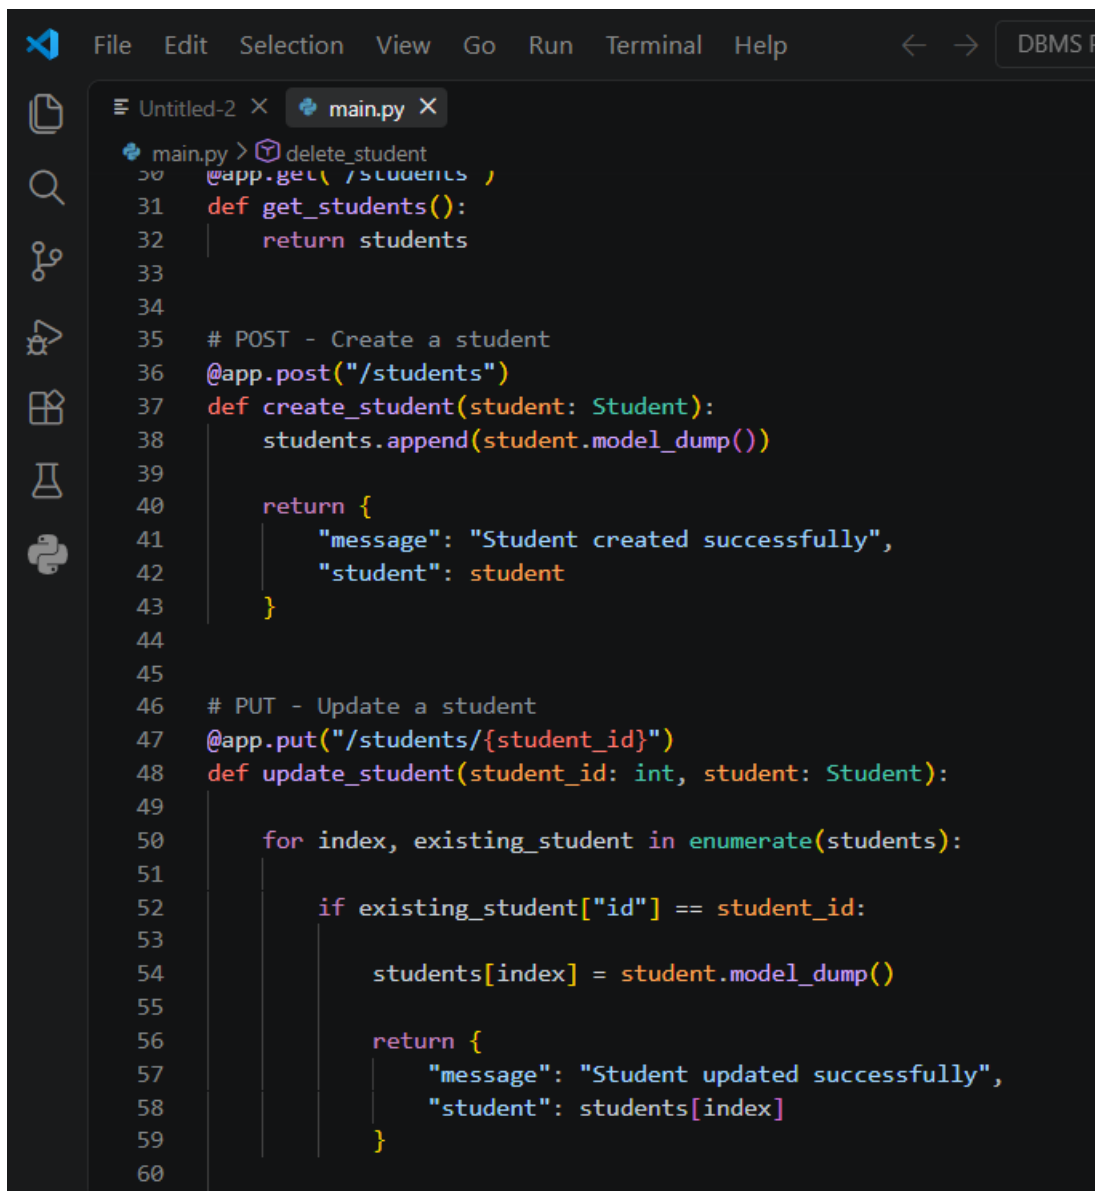

The image shows a VS Code editor window with a file named `main.py`. The code is a FastAPI application that uses Pydantic for data validation. It defines a `Student` model with fields `id`, `name`, and `department`. A temporary database is initialized with two students: Ravi (id: 101) and Priya (id: 102). A GET endpoint `/students` is defined to return all students.

```
1 from fastapi import FastAPI
2 from pydantic import BaseModel
3
4 app = FastAPI()
5
6
7 # Student model
8 class Student(BaseModel):
9     id: int
10    name: str
11    department: str
12
13
14 # Temporary database
15 students = [
16     {
17         "id": 101,
18         "name": "Ravi",
19         "department": "CSE"
20     },
21     {
22         "id": 102,
23         "name": "Priya",
24         "department": "CSE"
25     }
26 ]
27
28
29 # GET - Read all students
30 @app.get("/students")
31 def get_students():
```

The terminal at the bottom shows the application's startup and shutdown logs, including a warning about StatReload detecting changes in `main.py`.

```
INFO: Waiting for application shutdown.

```

```
File Edit Selection View Go Run Terminal Help
main.py > delete_student
@app.get("/students")
def get_students():
    return students

# POST - Create a student
@app.post("/students")
def create_student(student: Student):
    students.append(student.model_dump())

    return {
        "message": "Student created successfully",
        "student": student
    }

# PUT - Update a student
@app.put("/students/{student_id}")
def update_student(student_id: int, student: Student):
    for index, existing_student in enumerate(students):
        if existing_student["id"] == student_id:
            students[index] = student.model_dump()

            return {
                "message": "Student updated successfully",
                "student": students[index]
            }
```

# GET:

FastAPI 0.10.0 OAS 3.1

default

GET /students Get Students

Parameters

No parameters

Execute Clear

Responses

Curl

```
curl -X GET: \
  "http://127.0.0.1:8000/students" \
  -H "accept: application/json"
```

Request URL
